**INTERVENING
REALITY:
FROM INTERFACE TO
REALITY.**

Statement of Practice

I translate exclusive experiences
into accessible forms, and
materialize abstract social ideals.

I render:

- the critical palpable,
- the heritage alive,
- the human inclusive.

Core Exhibitions

01 „Sound Shape”

02 „The Fading Beauty”

03 „The White Ocean”

04 „In Memory of Bruce Lee”

For a complete catalog of works, please see the following pages.

01 „Sound Shape”

4

Designing for Touchable Sound

What it does?

Aims to make sound tangible for hearing-impaired children by creating tailored visual interactions in Unity3D.

How it was made?

Built through a full cycle of user research, iterative design, and prototyping.

What's next?

Serves as a technical foundation, with future work focused on refining its aesthetic and emotional impact.

Process & Realization

Part 1 Technical Core : From Signal to Form

Parsing audio data to map rhythm, pitch, and velocity into real-time particle parameters, driving visual generation.

Part 2 Multimodal Interaction : For Different Perceptions

Combining Leap Motion gestures, MIDI keyboard, and microphone input to create tailored interaction paths for varying degrees of hearing loss.

Part 3 Visual & UX Design: Friendly User Experience

Employing soft colors and cartoon elements, iterated through usability testing to ensure an intuitive and child-friendly interface.

Part 4 My Role : Independent Design & Development

As the sole creator, I led the full process from concept and programming to asset coordination, testing, and final delivery.

Reflection & Horizon

Guiding Question

How can we move beyond technical execution to achieve genuine artistic and emotional resonance?

This is the inquiry that now defines my practice.

Registration

Final Exhibition

User Testing

Demonstrated Outcome

This project—exhibited and formally registered—created an immersive environment for musical exploration. Testing confirmed its effectiveness in engaging hearing-impaired children, validating technology's practical power to bridge sensory gaps and open new pathways for multisensory understanding.

02 „The Fading Beauty”

7

An Interactive Memorial

What it does?

Award-winning interactive ritual where a selfie makes digital murals fade—embodying cultural fragility.

How it was made?

Public-engagement design using a hacked selfie stick to trigger a video narrative on loss.

What's next?

Shows interaction can catalyze preservation discourse, pointing toward more nuanced critical encounters.

An Award-Winning Project

Process & Realization

8

Part 1 From Research to Ritua

Deep study of neglected Liaoyang murals informed the goal: to make cultural loss physically felt. The “selfie ritual” bridged ancient art and modern behavior.

Part 2 Crafting the Encounter

- Interface: Selfie stick + Makey Makey = intuitive controls.
- Narrative: Web app toggled murals ↔ decay animation.
- Environment: Guided path, hidden tech, pure narrative focus.

Part 3 Iteration & Outcome

Iteratively tested for intuition. Exhibited and provincially awarded, validating its power for public engagement.

An Award-Winning Project

Reflection & Horizon

Guiding Question

It cemented my role as a catalyst for cultural conversation, leading to a core inquiry: How do we design interfaces that orchestrate not just interaction, but emotional and ethical resonance—turning viewers into advocates?

Demonstrated Outcome

This publicly exhibited project creates a tangible encounter with cultural loss. By transforming a common selfie into an interactive ritual, it effectively engages the public, validating technology's power to make urgent heritage issues felt and to open new pathways for critical reflection in shared spaces.

03 „The White Ocean”

10

A VR Experience for Ecological Empathy

What it does?

An immersive VR game that translates ocean pollution data into embodied cleanup tasks to foster ecological empathy.

How it was made?

It integrates real-world datasets and persuasive design principles to simulate marine waste impact through procedural VR interaction.

What's next?

Serves as a speculative framework for environmental storytelling, with potential for narrative expansion, multiplayer modes, and educational adaptation.

Process & Realization

11

Immersive Environment Development

Constructed in Unity using real-time particle systems and post-processing shaders to simulate dynamic underwater lighting and turbid water layers. Developed physics-driven interactions for the Oculus Rift controller set—enabling intuitive grab, collect, and dispose gestures—supported by dynamic feedback logic that enhances tactile responsiveness and presence.

Optimization & Integration

Performed systematic performance profiling to maintain consistent frame rates and visual fidelity across varied scene loads. Carefully calibrated visual indicators and haptic responses to balance sensory immersion with functional clarity, thereby strengthening the project's central premise: that direct action can become a means of ecological agency and awareness.

My Role :

Team Lead, responsible for creative strategy, art asset design, and code debugging.

A Speculative VR Game

Reflection & Horizon

Guiding Question

Can empathy-driven design motivate tangible action beyond the virtual realm? This line of inquiry prompts me to examine not only the affective power of immersive media, but also its potential to foster lasting behavioral shifts—compelling a closer look at how digital engagement might translate into meaningful ecological responsibility.

Demonstrated Outcome

By developing a VR system that transforms marine pollution into interactive cleanup tasks, the project converts abstract environmental awareness into embodied understanding. Through a points-based interaction loop and visceral feedback, it illustrates how immersive media can effectively merge cognitive and affective engagement, rendering distant ecological crises both personally resonant and experientially immediate.

04 „In Memory of Bruce Lee”¹³

An AR Portal to Cultural Resonance

What it does?

A personal AR experience that revives cultural memory by animating archival photos, allowing users to interact with a legend's iconic sounds and movements.

How it was made?

Built with Unity and AR tools, it anchors a responsive 3D character to physical photos through image recognition and touch-triggered interactions.

What's next?

Explores AR as a medium for narrative-driven remembrance, pointing toward interactive biographical archives that connect generations.

Process & Realization

14

From Archive to Interactive Presence

This project originated as an archival tribute to Bruce Lee's visual legacy, transforming a two-dimensional photograph into a responsive digital entity—shifting passive remembrance into an actively engaged, participatory experience.

Technical Implementation & Interaction Design

- Developed in Unity with a cross-platform AR toolkit for reliable image tracking and 3D content anchoring.
- Designed intuitive interaction logic: tapping designated screen areas triggers signature vocalizations and martial arts movements, balancing playfulness with ceremonial resonance.
- Optimized for mobile performance to ensure seamless integration of animations and sound effects.

Launching on a Memorial Date

Released on Bruce Lee's birthday, the project infused a technical prototype with emotional depth and temporal significance, elevating it into a small-scale public memorial that resonated deeply with its audience.

An AR Homage Project

Guiding Question

How can we use immersive technology to truly animate cultural memory—not just recreate historical imagery? This design challenge calls for interactions that both honor historical significance and build lasting connections, moving beyond surface representation to establish a tangible, resonant dialogue between people and the past.

Demonstrated Outcome

This project offers one answer through augmented reality: by transforming a still photograph into an interactive portrait, it invites users into Bruce Lee's world through gesture and sound. Released on his birthday, the work demonstrates how technically restrained yet emotionally rich interaction can create a living tribute—showing that when memory is given interactive form, temporal distance dissolves into an immediate, dignified encounter.

■ Full Index of Works

Core Exhibitions | Redefining Perception

1. Sound Shape (2020) 4
2. The Fading Beauty (2019) 7
3. The White Ocean (2018) 10
4. In Memory of Bruce Lee (2019) 13

Extended Explorations | Expanding the Methodology

5. Second Language (Concept, 2019) 18
6. Online Auto Show (AR, 2019) 19
7. Wishful Finance App (Prototype, 2017) 20
8. 0429 — A Vocal Gift (Interactive, 2021) 21

Supporting Works | Context & Process

9. Dancing Pulse (Audio-Visual, 2019) 23
10. Biodiversity Blind Box Series (IP Design, 2022) 23
11. The Black Vinyl Box Project (Curation, 2023) 24
12. Fitness App UI Redesign (Interface, 2017) 24

Selected Commercial Archives 25

Extended Explorations

17

05 „Second Language “

06 „Online Auto Show “

07 „Wishful Finance App “

08 „0429 - A Vocal Gift “

05 „Second Language“

Frame

learning from passive memorization to embodied participation, exploring how VR can transform vocabulary acquisition into spatialized, contextual immersion to bridge the gap between lexical knowledge and real-world usage.

Build

Starting with a “Jump & Jump”-inspired word-selection game, the project evolved into a VR experience where target vocabulary becomes interactive objects within themed 3D environments, creating situated, engaging learning interactions.

Reflect

The work confirms VR’s educational potential while exposing its current limits: spatial interaction strengthens word recognition but falls short in representing grammar, culture, and deeper language structures. This shows that immersion alone does not guarantee learning—future systems must integrate cognitive and social dimensions of language to build truly adaptive, immersive language-learning frameworks.

Embodied Vocabulary
Learning in VR

06 „Online Auto Show“

Frame

Traditional print media often fails to convey spatial presence and interactive experience. This project transforms car show promotion into an explorable digital experience, bridging the gap between physical display and digital engagement.

Build

Developed with Unity and Vuforia AR, the system converts printed posters into interactive 3D showrooms through image recognition. Users scan to enter virtual exhibits, manipulate car models with intuitive gestures, and engage with guided avatars—seamlessly transitioning from 2D print to 3D immersion.

Awarded Software Copyright

Reflect

Awarded a software copyright, this project validates AR as a tool for immersive marketing. Yet a deeper question remains: how can AR move beyond novelty to build lasting brand recognition? While intuitive touch controls and contextual staging are essential, sustained user connection depends on aligning technology with long-term brand narrative—shifting focus from experience to meaningful identification.

07 „Wishful Finance App“

Frame

Young adults often lack tools to build healthy financial habits. The challenge is to move beyond basic tracking toward goal-driven engagement—transforming budgeting into a meaningful ritual.

Build

Informed by user research, the design evolved from wireframes to high-fidelity prototypes. Features include spending visualization, goal-based saving, and social sharing—focused on clean interaction and real-time feedback tailored to student life.

Reflect

Can a tool both track spending and foster financial resilience? This project shows that visual feedback, goal incentives, and social interaction can turn passive tracking into active commitment—a functional and behavioral foundation for future tools.

智能记账功能细分 user story			
feature 功能点	As a (role) 角色	I want to (activity)活动	So that (business value)商业价值
开始记账	用户	便捷地记账	养成记账习惯 学会理财
进行分析	系统	对消费偏好 种类 等进行数据分析	得到自己的个性账单分析报告
鉴别正品	系统	鉴别正品	防范购物买到次品
消费评价与感受	用户	记录消费体验	形成自己的消费经验 提高消费质量

08,,0429 - A Vocal Gift “

Frame

A rapid prototype elevating birthday wishes into poetic, tangible interaction—asking how technology can create mindful, memorable connection beyond text and voice.

Build

In a 7-hour sprint, a WeChat Mini-Program captures “Happy Birthday” voice input, triggering desktop visual transformations: “0429” morphs into text, then into animated forest and flame—symbolizing mentorship and growth.

Reflect

Can technology resonate emotionally rather than perform digitally?

This project shows that by embracing spontaneity and transparent intent, technical systems can carry sincere narrative—turning code into warm, meaningful connection.

A Rapid-prototyping Personal Project.

Supporting Works

09 „Dancing Pulse “

10 „Animal Blind Box Series “

11 „The Black Vinyl Box Project “

12 „Fitness App UI Redesign “

09 „Dancing Pulse“

This audiovisual work integrates electronic music with campus scenes through motion-graphics rhythm translation. Applying audio-responsive animation techniques from video rendering courses alongside filmed campus footage, it creates a synesthetic music-visual narrative. The project serves as an experimental prototype, demonstrating how visual rhythm can enhance the emotional expression of sound.

This gamified campaign transforms sustainability into collectible digital-physical interaction. As part of a biodiversity-themed project in the Nescafé member mini-program, I managed the 3D animal model design and blind-box packaging iteration. By linking virtual tree-planting tasks to redeemable physical rewards, it effectively boosted user engagement and social sharing. The project illustrates how thoughtful IP design can connect brand values, ecological awareness, and community interaction.

„Animal Blind Box Series“

11 „The Black Vinyl Box Project “

This is a cultural initiative that leverages physical media to showcase independent musicians. As a digital content strategist, I helped design the “Riddle Plan,” curating sampler vinyl records released with the Saitalin turntable and organizing a series of live music festivals to foster direct connections between artists and audiences. The project demonstrates how tangible media and curated experiences can build meaningful bridges between niche creativity and public engagement.

This project addresses the common issue of fragmented user experience in fitness apps by reorganizing the interface around user behavior. By establishing clear visual hierarchies and a structured navigation system, it integrates training, nutrition, and social features into a cohesive fitness journey. This redesign reflects my ability to translate behavioral insights into intuitive and user-friendly interface solutions.
